

Dedication

In Memory of Pau Golanó 1964-2014

Pau Golanó was an anatomist by profession and a gifted artist in his chosen field. He was an amazing individual whose work will be a resource for surgeons for decades to come. His work was always done to perfection and is exemplified in this issue with his profound insight into the gastrocnemius complex. I have asked his coauthors to write a dedication in Spanish, which I have not translated so as to maintain the sentiment expressed by his friends and coworkers. An additional dedication has been provided by Professor C. Niek van Dijk.

I first met Pau Golanó in 2004 at a meeting in Barcelona in 2001 held at the University Hospital in Barcelona. His English at the time was rudimentary, and my Spanish language skills not much better, but we rapidly developed a friendship based on our mutual interests. I have admired him ever since. He will remain an icon in this field.
